PRESS RELEASE

Digitalized buildings for a better world

Kieback&Peter at the VISION 2045 SUMMIT 2022

Berlin, 03.11.2022. Kieback&Peter participates at the VISION 2045 SUMMIT from 7.-9.11.2022 for the first time. The summit in Sharm el-Sheikh (Egypt) takes place along of the UN Climate Change Conference 2022. It is an important platform worldwide to network with like-minded opinion leaders and partners from politics and society as well as the most diverse organizations.

At the "VISION 2045" summit (<https://vision2045.com>), leading representatives from business and politics jointly develop strategies for a sustainable future and work on their implementation. The focus will be on panel discussions around the 17 United Nations Sustainable Development Goals.

For the first time, a particular emphasis is also put on smart cities and buildings. The importance of buildings has been recognized because almost all real estates are significant CO₂ emitter today - especially in the sector of existing buildings. Buildings account for 38% of total CO₂ emissions.

At the VISION 2045 SUMMIT, Kieback&Peter, a leading expert for innovative building automation, highlights the importance of energy-efficient buildings for a sustainable future and showcase solutions for optimal building operation.

High time for sustainability

"We're running out of time," says Christoph Paul Ritzkat. "We recognize that. And as a company, we're stepping up and taking responsibility for our climate. We want to create a sustainable path forward using innovative building automation and digitalization to make the world a better place. But to do this, we all need to work together. VISION 2045 SUMMIT 2022 is our opportunity to network with other stakeholders. We believe optimizing existing buildings is the key to achieving climate goals. And our company is committed to becoming climate neutral by 2027."

80% of all the buildings that will span the globe in 2050 are now standing. Kieback&Peter's innovative solutions, such as our CO₂-reduction roadmap, help make buildings more energy- and cost-efficient. These creative approaches to reducing CO₂ emissions make it easier for property investors, owners, and operators to tackle some of the greatest challenges of our time, namely environmental protection, digitalization, and sustainability. (<https://www.kieback-peter.com/en/solutions/co2-roadmap/>).

At the VISION 2045 SUMMIT, Kieback&Peter, as a leading expert in building automation, will explain the importance of energy-efficient buildings for a sustainable future and present solutions for optimal building operation.

A company with a vision

For more than 90 years, the medium-sized pioneer Kieback&Peter has been working on sustainable automation solutions in the field of building control. This claim is also embodied in the vision of the 1,500-strong, globally active family business: "We digitalize buildings for a better world". About Kieback&Peter

Kieback&Peter GmbH & Co. KG was founded in 1927 in Berlin. With over 1,500 employees and 50 locations worldwide, the family-owned company is one of the leading providers of building automation. Experts integrate building systems such as heating, ventilation, air conditioning and fire protection in one optimized system with the aid of software and hardware. The medium-sized company ensures more comfort, efficiency and security in the building by using simple, smart solutions.

Experienced professionals look after the properties of commercial and public customers throughout their entire lifecycle – on-site, remotely and with centralized services. The engineers and technicians work with great passion on tailor-made automation solutions for their customers. They take just as much care of prestigious buildings like the Berlin Reichstag as they do the school next door. Kieback&Peter's top international customers include Airbus, Daimler, and Volkswagen.
